

IJETCOLOR™ 4.0 RIP AND WORKFLOW

IJETCOLOR 4.0 BENEFITS

- SPOT COLOR MATCHING**
 Match existing printed pieces with the integrated spot color matching application
- COLOR BOOST™ PROFILING**
 Preset color calibrations for the most common papers stocks
- ULTRA FAST VARIABLE DATA OUTPUT**
 A re-designed job processing engine speeds up the output of variable data jobs to an unbelievable level
- ENHANCED VERSION 10 RIP**
 Xitron Navigator Harlequin RIP and Workflow for easy job editing
- EASY-TO-USE WORKFLOWS**
 Quickly define job setup and store for repeated use
- INTEGRATED JOB COST CALCULATOR**
 Job cost estimation is easier than ever with the integrated job cost estimation tool

The iJetColor Workflow provides users the with powerful workflow and spot color matching capabilities to make job production quick and efficient. An industry standard Xitron Navigator workflow is the core technology behind the iJetColor workflow and is included with every iJetColor Digital Inkjet Press.

- SPOT COLOR MATCHING**
 iJetColor’s spot color matching application allows an operator to easily match the color of an existing printed job on the iJetColor Press.
- An interactive interface allows the user to make adjustments to CMYK recipe in order to achieve the proper color. A swatch sheet can be printed on either letter sized sheets or #10 envelopes or labels to verify the color before committing to the final output.
- GLOBAL COLOR ADJUSTMENT**
 Adjusting the overall color of the entire job is quick and easy with the iJetColor global color adjustment. Whether the job contains RGB, CMYK, spot colors, or a combination of all of these, the global color adjustment tool will adjust the color of the entire job.

Spot Color Matching Software

Global Color Adjustment
